

CLAMPING AND BRAKING ELEMENTS

INDIVIDUALIZATION ACTUATION BY CYLINDER SCREW

► SPECIFICATIONS COMPARED TO STANDARD PRODUCT

- Preventing Interference Contours Caused by the Lever
- Protection against accidental release
- Cylinder screw instead of a clamping lever
- Shorter design

► CUSTOMIZABLE SERIES

Series HK
Clamping element

Series HKR
Clamping element

► APPLICATION DESCRIPTION

- If there is not enough space or access is restricted, the clamping lever can be replaced by a cylinder head screw to open and close the clamping element.
- At the same time, the screw ensures a smaller interfering contour and prevents unintentional loosening.
